### Blow Up Syllabus

### H PUC BIOLOGY (36)

	UNIT VI : REPRODUCTION – 29 HOURS				
1	Chapter 1 : Reproduction in Organisations	5 Hrs			
	1.1 Asexual Reproduction  Budding (yeast), Binary fission, encystation and sporulation (Amoeba) with diagramatic explanation, Zoospore (Chlamydomonas), conidia(penicillium), buds(hydra) gemmules (sponges) and Fragmentation Vegetative propagation - Definition and mentioning the vegetative propagates like runner, sucker rhizome (ginger and banana), tuber (potato), offset(water hyacinth) bulbil (agave) and leaf buds (Bryophyllum)	2Hrs			
	1.2 Sexual Reproduction - Definition, phases of life cycle- juvenile, reproductive and senescence phases, oestrus and menstrual cycles.  Events in sexual reproduction 1.2.1 Pre-fertilization Events 1.2.1.1 Gametogenesis 1.2.1.2 Gamete Transfer 1.2.2 Fertilisation, types (external and internal fertilization); parthenogenesis	2 Hrs			
	1.2.3 Post-fertilization events 1.2.3.1 The Zygote 1.2.3.2 Embryogenesis, Oviparous and Viviparous animals	1 Hr			
2	Chapter 2 : Sexual Reproduction in Flowering Pla	nts 10 Hrs			
	2.1 Flower L S of flower 2.2 Pre-fertilization: Structure and Events 2.2.1 Stamen, Microsporangium and Pollen Grain 2.2.2 Pistil, Megasporangium (ovule) and Embryo sac  2.2.3 Pollination Kinds of pollination, Agents of pollination Out breeding devices, Pollen pistil interaction.	3 ½ Hrs 3 ½ Hrs			
	Artificial hybridization  2.3 Double Fertilization  2.4 Post-fertilization: Structures and events  2.4.1 Endosperm  2.4.2 Embryo  2.4.3 Seed  2.5 Apomixis and Polyembryony	3 Hrs			

3	Chapter 3: Human Reproduction	9 Hrs
	3.1: The male reproductive system	i ½ Hrs
	3.2 The female reproductive system	1 ½ Hrs
	3.3 Gametogenesis	3 Hrs
	3.4 Menstrual Cycle	l Hr
	3.5 Fertilisation and Implantation	I Hr
	3.6 Pregnancy and Embryonic Development	:
	3.7 Parturition and Lactation	I Hr

4	Chapter 4: Reproductive and Strategies		
	4.1 Reproductive Health Problems and Strategies	1 Hrs	
$\dashv$	4.2 Population Explosion and Birth Control	1 ½ Hrs	
	<ul><li>4.3 Contraception and Medical Termination of Pregnancy (MTP)</li><li>4.4 Sexually transmitted Diseases (STD s)</li></ul>	1 Hr	
$\dashv$	4.5 Infertility	1 ½ Hrs	
5	UNIT VII: GENETICS AND EVOLUTION - 3  Chapter 5: Principle of Inheritance and Variat		
	5.1 Mendel's Laws of Inheritance	Hr	
	5.2 Inheritance of One Gene	3 Hrs	
	5.2.1 Law of Dominance		
	5.2.2 Law of Segregation		
	5.2.2.1 Incomplete Dominance		
	5.2.2.2 Co-dominance	4 ½ Hrs	
	5.3 Inheritance of Two Genes	7 72 1117	
	5.3.1 Law of Independent Assortment 5.3.2 Chromosomal theory of Inheritance	1	
	5.3.3 Linkage and Recombination		
	5.4 Sex Determination	1 Hr	
	5.4.1 Sex Determination in Human		
	5.5 Genetic Disorders	2 1/2 Hrs	
	5.6.2 Mendelian Disorders		
	5.6.3 Chromosomal Disorders		
6	Chapter 6: Molecular Basis of Inheritance	12 Hrs	
	6.1 The DNA	1 Hrs	
	6.1.1 Structure of Polynucleotide chain		
	6.1.2 Packaging of DNA Hehx		

	6.2 The search for Genetic Material 6.2.1 The Genetic Material is DNA(Griffith and Avery experiments) 6.2.2 Properties of Genetic Material (DNA versus RNA)	2 Hrs	The second secon
		l Hir	
	<ul><li>6.3 RNA World</li><li>6.4 Replication</li><li>6.4.2 The Machinery and the Enzymes</li></ul>		
	6.5 Transcription 6.5.1 Transcription Unit	2 Hrs	1
	6.5.2 Transcription Unit and the Gene		
	6.5.3 Types of RNA and the process of transcription 6.6 Genetic Code	2 Hrs	
	6.6.2 I RNA the Adapter Molecule		:
	6.7 Translation	l Hr	
	6.8 Regulation of Gene Expression 6.8.1 The Lac Operon	-]r	:
	6.9 Human Genome Project 6.9.1 Salient Features of Human Genome 6.9.2 Application and Future Challenges (excluding methodologies)	1 1-1r	
	6.10 DNA Fingerprinting	1 1 111	₩  -  -
7	Chapter 7: Evolution		6 Hours
	7.1 Origin of Life	1 Hr	
	7.2 Evolution of Life Forms A Theory 7.3 Evidences for Evolution (homology, analogy and embryological; Mentioning the paleontological evidence)	2 Hr	
	7.4 Adaptive Radiation in Darwin's Finches	½ Hr	1
	7.6 Mechanism of Evolution	½ Hr	
	7.7 Hardy Weinberg Principle (mentioning of 5 factors affecting Hardy-Weinberg equilibrium)	1 Hr	
	7.9 Origin and Evolution of Man (mentioning the stages of human evolution)	1 Hr	
	UNIT VIII : BIOLOGY IN HUMAN WELFAR	E – 25 HRS	
8	CHAPTER 8°: HUMAN HEALTH AND DISEASE		10 Hours
	8.1 Pathogen definition, Mentioning of diseases, causes and symptoms of Typhoid, Pneumonia, Common cold Malaria (excluding life-cycle of Plasmodium).  Amoebiosis, Ascariasis and Filariasis (excluding appropriate and control)	2 Hrs	

prevention and control)

1 1		3 Hrs	1
	8.2 IMMUNITY	3 nrs	1
	8,2.1 - Innate immunity		
	8.2.2 Acquired immunity (including antibody		
	structure)		
i	8.2.4 Vaccination and immunization		
	8.2.5 Altergies (short notes)		
	8.2.6 Autoimmunity definition		
		ì	2,22,22
	8.3 AIDS	l Hr	
	Causes		
	HIV replication in detail		į
	Symptoms		Ì
İ	Diagnostic test		
İ	Prevention		
	8.4 CANCER	1 Hr	
1	Definition		Ì
1			ļ
	Types (Benign and malignant only)		
	Causes		
1	Detection		į
	Diagnosis		
	Treatment		
	8.5 DRUGS AND ALCOHOL ABUSE	3 Hrs	
	Opioids (excluding chemical structure),		
	Cannabinoids (excluding chemical structure).		
	Cocaine		
	Hallucinogens	•	
	Sedatives		
1	Smoking ( effects of tobacco smoke)	Î	•
	8.5.1 Adolescence and Drug abuse		
	8.5.2 Addiction and Dependence (including withdrawa)		
1	symptoms)		
	8.5.3 Effects of drug abuse		
<b>_</b>	8.5.4 Prevention and Control		No
	and a property for call and the area	T IN FOOD	O)
9	CHAPTER 9 - STRATEGIES FOR ENHANCEMEN	LINFOOD	Hours
	PRODUCTION	·	510013
	L THODANIONA	4 Hrs	
	9.1 ANIMAL HUSBANDRY	4 mis	
	9.1.1 Management of farms and farm animals		
	9.1.1.1 Dairy farm management	1	
	9.1.1.2 Poultry farm management		
	9.1.2 Animal Breeding		
ž	Inbreeding		
	Outbreeding		
İ	Outcrossing		and the second
	Cross breeding		
	Interspecific hybridization		
	Controlled breeding (AI and MOET)		1
ŀ	Comoned become ter ma more of	**	
	9.2 PLANT BREEDING	4 Hrs	<del> </del>
		,	
-	9.2.1 Plant breeding detailed account	and the second	
1	(Steps in breeding to be explained)		

٠.,

ĺ			<del> </del>
	9.3 SINGLE CELL PROTEIN	½ Hr	
	9.4 TISSUE CULTURE	½ Hr	
0	CHAPTER 10 : MICROBES IN HUMAN WELFARE		6 Hrs
	10.1 MICROBES IN HOUSEHOLD PRODUCTS (Curds, Doughening and Alcohol i.e., Toddy)	l Hr	
	10.2 MICROBES IN INDUSTRIAL PRODUCT	2 Hrs	
	10.2.1 Fermented beverages 10.2.2 Antibodies		
	10.2.3 Chemicals, Epzymes and other molecules		ļ
	10.3 MICROBES IN SEWAGES TREATMENT	I Hr	
	(Detailed account of Primary treatment, Secondary treatment and BOD concept)	and the second s	
	Ganga Action Plan (To be mentioned)		
	Yamuna Action Plan (To be mentioned)	l Hr	ŀ
	10.4 MICROBES IN THE PRODUCTION OF BIOGAS	I FIT	
* * *	(Including a typical biogus plant) 10.5 MICROBES AS BIOCONTROL AGENTS	½ Hr	
	10.6 MICROBES AS BIOFERTILIZERS	1/2 Hr	
	UNIT IX - BIOTECHNOLOGY : 12 Hotechnology : 12 Hotechnology : PRINCIPLES	urs	7 Hrs

	16.9 Deforestation 16.9.1 A case study of people's participation in conservation of forests.	
-	Total number of teaching Hours	120 Hrs

### **Design of Question Paper**

Class: HPUC

Subject : Biology

Code: 36

Time: 3Hours 15 Minutes(of which minutes for reading the questions Paper).

Max.Marks:70

The weightage of the distribution of marks over different dimensions of the question paper shall be as follows:

### A. Weightage to Objectives:

Objective	ve Weightage	
•	%	·
Knowledge	40%	42
Understanding	30%	33
Application	15%	15
Skill	15%	15

Note: 1% or 2% variation is allowed per objective.

### B. Weightage to unit/chapter in Biology

Unit	No		No of Hours	Marks	Total Marks	
	7	Reproduction in organisms	05	95		
Vì	2	Sexual reproduction in flowering plants	10	08	25	
	3	Human reproduction	09	07	•	
	4	Reproductive Health	05	05		
	Š	Principle of Inheritance and variation	12	10	25	
VII.	6	Molecular Basis of inheritance	12	10		
	7	Evolution	06	05	\$	
	3 8	Human health and diseases	10	08	j	
VIII	ÿ	Stratogies for enhancement of food products	od 09 08		22	
	10	Microbes in Human welfare	06	06		
	11	Biotech: Principles and Processes	07	06	11	
1X	j 12	Biotech: Application	05	05	''	
	13	Organism and Population .	07	06	22	
ν,	14	Ecosystem	06 1/2	06		
·X	15.	Biodiversity and Conservation	03 1/2	04	1	
	16	Environmental Issues	07	06		
		Total	120		105	

Note: Variation of one mark per chapter/unit is allowed. However the total marks should not exceed 105.

### C. Weightage to forms of Questions:

Part	Type of questions	Main	Number of question to be set	Number of question to be answered	Units to be covered
Δ	1 mark –Very short   answer(VSA)		10	. 10	Units)
В	2 marks –short answer(SA1)		8	5	
C	3 marks –short answer(SA2)		8	5	s (05
D	5 marks -long	, Sec-1	05	04	Units
	answer(LA)	Sec-II	05	63	T T

### D. Weightage to level of difficulty:

	Level	Weightage%	Marks
ĺ	Easy	40%	• 28
	Average	40%	28
	Dilficult	20%	14

### General instructions:

- Questions should be clear, unambiguous understandable and free from grammatical errors.
- Questions which are based on same concepts, law, fact etc. and which generate the same answer should not be repeated under different forms(VSA.SA and EA)

### BLUE PRINT FOR SUMMATIVE ASSESSMENT 2<sup>nd</sup> YEAR PUC SUBJECT: BIOLOGY (36) CHAPTER-WISE WEIGHTAGE

# MODEL QUESTION PAPER SUBJECT: BIOLOGY (36)

2<sup>nd</sup> year PUC

Time: 3 Hours and 15 minutes GENERAL INSTRUCTIONS:

i) This question paper consists of four parts A, B, C and D .Part D consists of two parts, Section-I and Section-II.

ii) All the Parts are Compulsory.

iii) Draw diagrams wherever necessary. Unlabelled diagrams or illustrations do not attract any marks.

### PART-A

### Answer the following questions in One Word or One Sentence each: -

10x1=10

Max Marks: 70

1. Name the hormone that induces rupturing of Graafian follicle.

- 2. Sertoli cells are very much essential during spermatogenesis. Why?
- 3. Define term 'saltation'.
- 4. Name the pathogen that causes amoebiasis.
- 5. What is micropropagation?
- 6. What are Flocs?
- 7. Mention significance of gel electrophoresis in rDNA technology.8. Why the cells of malignant tumors are considered dangerous?
- 9. Why Western Ghats are considered as one of the biodiversity hotspots?
- 10. "Some animals, if unable to migrate, might avoid the stress by escaping in time". Justify the statement citing one example.

### **PART-B**

### Answer any FIVE of the following questions in 3-5 sentences each, wherever applicable:

5x2=10

- 11. What is parthenogenesis? Name an animal showing this.
- 12. Differentiate between incomplete dominance and co dominance.
- 13. "Darwin's finches represent one of the best examples for adaptive radiation". Comment.
- 14. Draw a neat labeled diagram of an antibody molecule.
- 15. What happens if there is a continuous inbreeding in animals? Discuss the strategy to overcome the problem associated with continuous inbreeding.
- 16. Draw a neat labeled diagram of sparged stirred tank bioreactor.
- 17. Write a note on co-extinction.
- 18. "India is rich in genetic diversity". Justify this statement by giving two examples.

### PART-C

### Answer any FIVE of the following Questions in 40-80 words each, wherever applicable.

5x3=15

- 19. Name the following:
- i) Asexual reproductive structures of Hydra.
- ii) Vegetative propagules of Agave.
- iii) The plant that flowers once in twelve years.
- 20. Differentiate between Microsporogenesis and megasporogenesis.
- 21. By using Punnet square, schematically represent the dihybrid cross experiment conducted by Mendel using seed color and seed shape of pea as characters.
- 22. a) Write a note on homologous organs. (2)
- b) Write the scientific name of man like primate who probably lived in East African grasslands about 3-4 million years ago. (1)

- 23. Describe the effects of drug abuse.
- 24. Write a note on downstream processing.
- 25. Draw a simplified schematic representation of phosphorous cycle.
- 26. Define ecological succession. Mention the two types of succession in plants based on the nature of the habitat. What is a pioneer species?

### PART-D Section-I

## Answer any FOUR of the following questions on 200-250 words each, wherever applicable. 4x5=20

27. Explain how some plants are adapted for achieving pollination through wind.

How Vallisneria and seagrasses achieve pollination?

- 28. a) Draw a neat labelled diagram of sectional view of seminiferous tubule(3).
- b) Explain the mechanism of parturition with the help of fetal ejection reflex (2).
- 29. What is infertility? How infertility is treated by assisted reproductive technologies like IVF-ET and ZIFT?
- 30. What are the salient features of double helical structure of DNA?
- 31. Draw the schematic structure and explain the different regions of a transcription unit.
- 32. Discuss the contribution of Sutton and Boveri by making a comparison between the behavior of chromosomes and genes during meiosis, to explain Mendel's Laws.

### Section-II

## Answer any THREE of the following questions in 200-250 words each, wherever applicable. 3x5=15

- 33. Explain the main steps involved in the breeding of a new genetic variety of crop plants.
- 34. "Genetically modified plants can reduce the use of chemical pesticides". Justify the statement. Write a note each on *Bt* toxin and *Bt* cotton.
- 35. a) Describe the roles of: i) Microbes in biogas production (2) ii) Mycorrhiza as biofertilizer (2)
- b) Name the fungus that produces cyclosporin A (1).
- 36, a) Explain how Mediterranean orchid adapted to achieve pollination. (2)
- b) Describe the importance of predators in an ecosystem (2).
- c) What is Gause's "competitive exclusion principle"?
- 37. Describe the participation of people in the conservation of forests in India by taking Bishnoi community incident and Chipko movement as examples. Add a note on Joint Forest Management.

4 ]

# MODEL QUESTION PAPER SUBJECT: BIOLOGY (36) 2<sup>nd</sup> year PUC ANSWERS

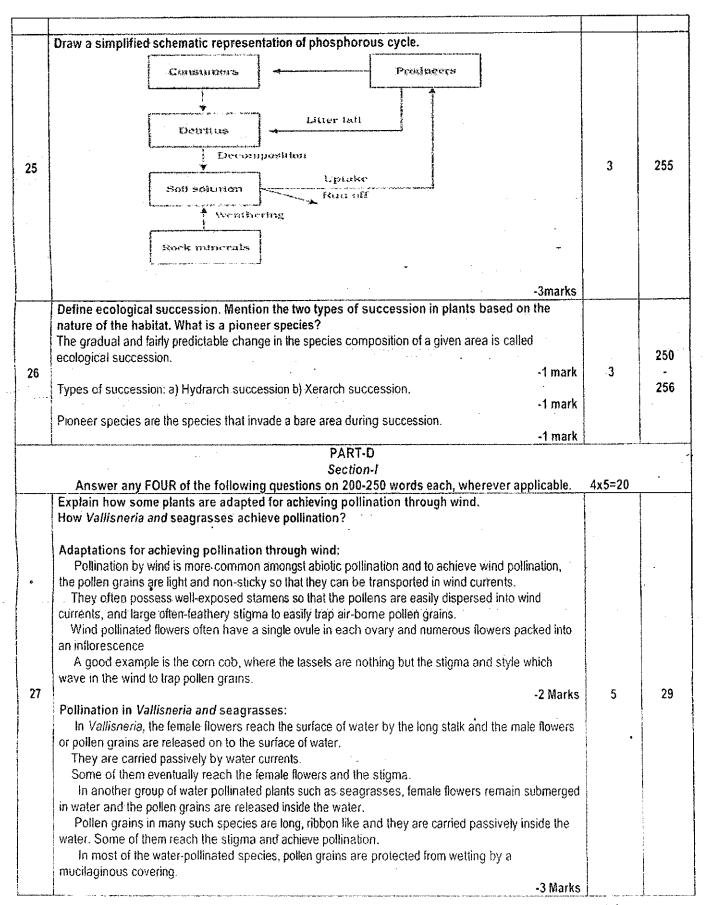

QUE NO.	ANSWERS/VALUE POINTS	MARKS	REFER PAGE NO. (IN THE TEXT BOOK)
	PART-A : Answer the following questions in One Word or One Sentence each: - 10x1=1	n	
	Name the hormone that induces rupturing of Graafian follicle.		
1	LH/Luteinizing Hormone	1	51
2	Sertoli cells are very much essential during spermatogenesis. Why? Sertoli cells provide nutrition to the germ cells during spermatogenesis.	1	43
3	Define term 'saltation'. Single step large mutation that caused the speciation is called saltation.	1	135
4	Name the pathogen that causes amoebiasis.  Entamoeba histolytica	1	148
5	What is micropropagation? The method of producing large number of plantlets in a short period of time through tissue culture is called micropropagation.		177
6	What are Flocs? Flocs are masses of bacteria associated with fungal filaments to form mesh like structures formed during secondary treatment of sewage.	***************************************	184
7	Mention significance of gel electrophoresis in rDNA technology.  The fragments of DNA obtained after cutting of DNA by restriction endonucleases can be separated by Gel electrophoresis.	1	198.
8	Why the cells of malignant tumors are considered as dangerous?  These cells grow very rapidly, invading and damaging the surrounding normal tissues.  OR  As the cells of malignant tumor actively divide and grow they also starve the normal cells by competing for vital nutrients.  OR  Cells sloughed from such tumors reach distant sites through blood, and wherever they get lodged in the body, they start a new tumor there.  -Any one -1 mark	1	157
9	"Western Ghats are considered as one of the biodiversity hotspots". Why?  Because Western Ghats are the regions with very high levels of species richness and high degree of endemism and hotspots are also regions of accelerated habitat loss.	1	266
10	"Some animals, if unable to migrate, might avoid the stress by escaping in time". Justify the statement citing one example.  For example,  Bears enter into a state called hibernation during winter to escape in time.  Some snails and fish go into aestivation to avoid summer-related problems such as heat and desiccation.  Many zooplankton species in lakes and ponds enter into a stage of suspended development called diapause.  -Any one -1 mark	1	225
		1	

	PART-B Answer any FIVE of the following questions in 3-5 sentences each, wherever applicable:	5x2=10	
11	What is parthenogenesis? Name an animal showing this.  The phenomenon of development of female gamete into a new organism without fertilization is called parthenogenesis.  -1 mark  Example: rotifers, honeybees and even some lizards and birds (turkey)	2	14
12	-Anyone-1 mark  Differentiate between incomplete dominance and co dominance. Incomplete dominance is a condition where F1 has a phenotype that did not resemble either of the two parents and is in between the two.  Co-dominance is a condition in which the F1 generation resembles both parents.  -2marks	2	76-77
13	"Darwin's finches represent one of the best examples for adaptive radiation". Comment.  In Galapagos Islands, Darwin observed the diversity of particular group of black birds that are later called Darwin's Finches.  There were many varieties of finches in the same island and all varieties evolved on the land itself. From the original seed-eating features, many other forms with altered beaks evolved and this helped the finches to become insectivorous and vegetarian finches.  The process of evolution of different species in a given geographical area starting from a point and literally radiating to other areas of geography or habitats is called adaptive radiation.  And Darwin's finches represent one of the best examples for adaptive radiation.	2	132 - 133
14	Antigen binding site  Antigen binding site  Light chain  Heavy chain  Antigen binding site  Antigen binding site  Antigen binding site  Antigen binding site  Antigen binding site  Antigen binding site	2	151
15	What happens if there is a continuous inbreeding? Discuss the strategy to overcome the problem associated with continuous inbreeding.  Continuous inbreeding reduces fertility and even productivity. This is called inbreeding depression.  -1 mark  To overcome this problem, selected animals of breeding population should be mated with unrelated superior animals of the same breed. This helps in restoring fertility and yield.  -1 mark	2	168

	Draw a neat labeled diagram of sparged stirred tank bioreactor.		
16	Increased surface area for oxygen transfer  Bubbles dramatically increase the oxygen transfer area	2	204
17	fate.  Another example is the case of a coevolved plant-pollinator mutualism where extinction of one	2	265
11	invariably leads to the extinction of the other.  "India is rich in genetic diversity". Justify this statement by giving two examples.  Genetic diversity shown by the medicinal plant Rauwolfia vomitoria growing in different Himalayan ranges might be in terms of the potency and concentration of the active chemical (reserpine) that the plant produces.  India has more than 50,000 genetically different strains of rice, India has more than 1,000 varieties of mango.  -Any two examples- One mark for each example-2 marks	2	259
	PART-C Answer any FIVE of the following Questions in 40-80 words each, wherever applicable.	5x3=15	
15	Name the following:  i) Asexual reproductive structures of Hydra.  Buds  -1 mark  ii) Vegetative propagules of Agave.  Bulbils  -1mark  lii) The plant that flowers once in twelve years  Neelakurunji/Strobilanthus kunthiana	3	6-7
	-1 mark		

Differentiate between Microsporogenesis and megasporogenesis.  Microsporogenesis is the process of formation of microspores from the pollen mother cell through meiosis, where as megasporogenesis is the process of formation of megaspore from megaspore mother cell.  20 mother cell.  Microsporogenesis occurs inside the pollen sac of anther whereas megasporogenesis occurs inside the ovule.  1 mark  By using Punnet square, schematically represent the dihybrid cross experiment conducted by Mendel using seed color and seed shape of pea as characters.  Programmation  1 mark  By using Punnet square, schematically represent the dihybrid cross experiment conducted by Mendel using seed color and seed shape of pea as characters.  Programmation  1 mark  By using Punnet square, schematically represent the dihybrid cross experiment conducted by Mendel using seed color and seed shape of pea as characters.  Programmation  1 mark  1 mark  1 mark  1 mark  1 mark  1 mark  2 mark  1 mark  2 mark  2 mark  2 mark  2 mark  3 mark  2 mark  2 mark  3 mark  4 mark  4 mark  4 mark  4 mark  4 mark  4 mark  4 mark  4 mark  4 mark  4 mark  4 mark  4 mark  4 mark  4 mark  4 mark  4 mark  4 mark  4 mark  5 mark  6 mark				
Mendel using seed color and seed shape of pea as characters. ( mirve )	21	Mendel using seed color and seed shape of pea as characters.  P generation  Record Rec	3	79

22	a) Write a note on homologous organs. (2)  Whales, bats, Cheetah and human (all mammals) share similarities in the pattern of bones of forelimbs.  These forelimbs perform different functions in these animals, they have similar anatomical structure, ie., all of them have humerus radius, ulna, carpals, metacarpals and phalanges in their forelimbs.  Hence, in these animals, the same structure developed along different directions due to adaptations to different needs and these structures are called homologous structures.  Homology indicates common ancestry. Other examples are vertebrate hearts or brains. In plants also, the thorn and tendrils of Bougainvillea and Cucurbita represent homology.  -2 marks  b) Write the scientific name of man like primate who probably lived in East African grasslands about 3-4 million years ago. (1)  Australopithecines  -1 Mark	3	129 - 130
23	Describe the effects of drug abuse.  The effects of drug abuse are  1. A drug/alcohol addict becomes the cause of mental and financial distress to his/her entire family and friends.  2. The most common warning signs of drug and alcohol abuse among youth include drop in academic performance, unexplained absence from school/college, lack of interest in personal hygiene, withdrawal, isolation, depression, fatigue, aggressive and rebellious behaviour, deteriorating relationships with family and friends, loss of interest in hobbies, change in sleeping and eating habits, fluctuations in weight, appetite, etc.  3. They (mis)use narcotic analgesics, anabolic steroids, diuretics and certain hormones in sports to increase muscle strength and bulk and to promote aggressiveness and as a result increase athletic performance.  4. The side-effects of the use of anabolic steroids in females include masculinisation (features like males), increased aggressiveness, mood swings, depression, abnormal menstrual cycles, excessive hair growth on the face and body, enlargement of clitoris, deepening of voice. In males it includes acne, increased aggressiveness, mood swings, depression, and reduction of size of the testicles, decreased sperm production, potential for kidney and liver dysfunction, breast enlargement, premature baldness, enlargement of the prostate gland. These effects may be permanent with prolonged use.  5. In the adolescent male or female, severe facial and body acne, and premature closure of the growth centers of the long bones may result in stunted growth.  6. The immediate adverse effects of drug abuse are manifested in the form of reckless behavior, vandalism and violence. Excessive doses of drugs may lead to coma and death due to respiratory failure, hearf failure or cerebral hemorrhage.  7. Those who take drugs intravenously (direct injection into the vein using a needle and syringe), are much more likely to acquire serious infections like AIDS and hepatitis B.	3	161
24	Any three effects- 1 mark for each  Write a note on downstream processing.  The downstream processing is an essential step where after completion of the biosynthetic stage of a drug, the product has to be subjected through a series of processes before it is ready for marketing as a finished product.  The processes include separation and purification, which are collectively called downstream processing.  The product has to be formulated with suitable preservatives. Such formulation has to undergo thorough clinical trials as in case of drugs. Strict quality control testing for each product is also required.  -3marks	3	204

	a) Draw a neat labelled diagram of sectional view of seminiferous tubule (3).		
28	Spermatozoa Spermatocyte Primary spermatocyte Primary spermatocyte Section cell Section cell Spermatogonium Spermatocyte Primary spermatocyte Primary spermatocyte Section cell Section cell Section cell Section reflex (2). Parturition is induced by complex neuro-endocrine mechanism. The signals for parturition originate from the fully developed fetus and the placenta which induces mile uterine contractions called fetal ejection reflex and this triggers release of oxytocin from the maternal pituitary. Oxytocin acts on the uterine muscle and causes stronger uterine contractions, which in turn stimulates further secretion of oxytocin. The stimulatory reflex between the uterine contraction and oxytocin secretion continues resulting in stronger and stronger contraction, which results in the expulsion of baby from the uterus through birth canal.	5	<b>47 54</b>
29	What is infertility? How infertility is treated by assisted reproductive technologies like IVF-ET and ZIFT? Infertility is the inability to produce children in spite of unprotected sexual co-habitation.  -1Marks Infertile couples (male/female) could be assisted to have children through certain special techniques commonly known as Assisted Reproductive Technologies (ART).  In vitro fertilization (IVF-fertilization outside the body in almost similar conditions as that in the body) followed by embryo transfer (ET) is one of such methods.  In this method, popularly known as test tube baby programme, ova from the wife/donor (female) and sperms from the husband/donor (male) are collected and are induced to form zygole under simulated conditions in the laboratory.  The zygote or early embryos (with up to 8 blastomeres) could then be transferred into the fallopian tube.  -3Marks In zygote intra fallopian transfer (ZIFT) the zygote is transferred into the fallopian tube to complete its further development.	5	64
30	What are the salient features of double helical structure of DNA?  The salient features of the Double-helix structure of DNA are as follows:  1. It is made of two polynucleotide chains, where the backbone is constituted by sugar-phosphate, and the bases project inside  2. The two chains have anti-parallel polarity. It means, if one chain has the polarity 5-'3', the other has 3'-5'.	5	97-98

	3. The bases in two strands are paired through hydrogen bonds with Thymine from opposite strand-Cytosine with three H-bonds. As a result, always a penerates approximately uniform distance between 4. The two chains are coiled in a right-handed fashion one billionth of a meter, that is 10-9 m) and there are Consequently, the distance between a base pair in a 5. The plane of one base pair stacks over the other confers stability of the helical structure.	and vice-versa. Similarly, Guanine is bonded with burine comes opposite to a pyrimidine. This the two strands of the helix.  on. The pitch of the helix is 3.4 nm (a nanometer is e roughly 10 base pairs in each turn.  a helix is approximately equal to 0.34 nm.

	Section-II	2-5-45	
33	Answer any THREE of the following questions in 200-250 words each, wherever applicable.  Explain the main steps involved in the breeding of a new genetic variety of crop plants.  (i) Collection of variability: Collection and preservation of all the different wild varieties, species and relatives of the cultivated species (followed by their evaluation for their characteristics) is a prerequisite for effective exploitation of natural genes available in the populations.  (ii) Evaluation and selection of parents: The germplasm is evaluated so as to identify plants with desirable combination of characters. The selected plants are multiplied and used in the process of hybridization. Purelines are created wherever desirable and possible.  (iii) Cross hybridization among the selected parents: The desired characters have very often to be combined from two different plants (parents), for example high protein quality of one parent may need to be combined with disease resistance from another parent. This is possible by cross hybridizing the two parents to produce hybrids that genetically combine the desired characters in one plant.  (iv) Selection and testing of superior recombinants: This step consists of selecting, among the progeny of the hybrids, those plants that have the desired character combination. This step yields plants that are superior to both of the parents. These are self-pollinated for several generations till they reach a state of uniformity (homozygosity), so that the characters will not segregate in the progeny.  (v) Testing, release and commercialization of new cultivars: The newly selected lines are evaluated for their yield and other agronomic traits of quality, disease resistance, etc. This evaluation is done by growing these in the research fields and recording their performance under ideal fertilizer application, irrigation, and other crop management practices.	3x5=15	171
34	"Genetically modified plants can reduce the use of chemical pesticides". Justify the statement. Write a note each on Bt toxin and Bt cotton.  Since the genes introduced into the plants can produce the pest killing toxins in the plants itself, the farmers need not spray pesticides.  -1 mark  Bt toxin:  Bt toxin is produced by a bacterium called Bacillus thuringiensis(Bt).  Some strains of Bacillus thuringiensis produce proteins that kill certain insects such as lepidopterans (tobacco budworm, armyworm), coleopterans (beetles) and dipterans (files, mosquitoes).  B. thuringiensis forms protein crystals during a particular phase of their growth and these crystals contain a toxic insecticidal protein.  The activated loxin binds to the surface of midgut epithelial cells and creates peres that cause cell swelling and lysis and eventually cause death of the insect.  -2Marks  Bt cotton:  Bt cotton is a transgenic cotton variety that contains a gene from a bacterium Bacillus thuringiensis. The product of the gene can kill the insect.  Specific Bt toxin genes were isolated from Bacillus thuringiensis and incorporated into the cotton plants.  The choice of genes depends upon the crop and the targeted pest, as most Bt toxins are insect-group specific.  The toxin is coded by a gene named cry. There are a number of them, for example, the proteins encoded by the genes crylAc and cryllAb control the cotton bollworms.  -2 marks	5	208 209
35	a) Describe the roles of: i) Microbes in biogas production (2) ii) Mycorrhiza as biofertilizer (2) b) Name the fungus that produces cyclosporine A (1).	5	7

	The roles of:  i) Microbes in biogas production: Certain bacteria, which grow anaerobically on cellulosic material, produce large amount of methane along with CO <sub>2</sub> and H <sub>2</sub> .  These bacteria are called methanogens. An example for methanogen is Methanobacterium. The excreta or the dung of cattle is rich in these bacteria. The dung can be used for generation of biogas.	ne	185 - 186
	During the biogas production, slurry of cow dung is used in a biogas plant, where the methane is produced by these bacteria.  -2 marks		407
	Some fungi are also known to form symbiotic associations with plants.  They are called mycorrhiza. Many members of the genus <i>Glomus</i> form mycorrhiza.  The fungal symbiont in these associations absorbs phosphorus from soil and passes it to the plant.  Plants having such associations show other benefits also, such as resistance to root-borne pathogens, tolerance to salinity and drought, and an overall increase in plant growth and	The second secon	187 - 188

	<ul> <li>a) Explain how Mediterranean orchid adapted to achieve pollination. (2).</li> <li>Mediterranean orchid Ophrys employs a mechanism called 'sexual deceit'.</li> <li>Mediterranean orchid has modified their flowers to attract the right pollinator insect and ensure guaranteed pollination by it.</li> <li>In Mediterranean orchid, one petal of the flower resembles the female bee in colour and markings.</li> <li>The male bee is attracted thinking that it is a female, and 'pseudocopulates' with the flower.</li> <li>As a result the pollination occurs. But bee does not get any benefits. This is a good example for coevolution.</li> </ul>		238
36	-2 marks b) Describe the importance of predators in an ecosystem (2) Predator keep prey populations under control.	5	
	Predator acts as a passage for transfer of energy across trophic level.  Predators also help in maintaining species diversity in a community, by reducing the intensity of		233
on the barrant of the control of the	competition among competing prey species.  Predators also help in maintaining species diversity in a community, by reducing the intensity of competition among competing prey species.	1 (4) (4) (4) (4) (4) (4) (4) (4) (4) (4)	234
	-Any four points-2 marks c) What is Gause's "competitive exclusion principle"?		
	Gause's 'Competitive Exclusion Principle' states that two closely related species competing for the same resources cannot co-exist indefinitely and the competitively inferior one will be eliminated eventually.  -1 mark		235
		ļ	
37	Describe the participation of people in the conservation of forests in India by taking Bishnoi community incident and Chipko movement as examples. Add a note on Joint Forest Management.	5	284
31	Bishnoi community incident: In 1731, the king of Jodhpur in Rajasthan asked one of his ministers to arrange wood for constructing a new palace and the minister and workers went to a forest near a village, inhabited by	J	285

Bishnois, to cut down trees.

The Bishnoi community is known for its peaceful co-existence with nature. The effort to cut down trees by the kings was thwarted by the Bishnois.

A Bishnoi woman Amrita Devi showed exemplary courage by hugging a tree and daring king's men to cut her first before cutting the tree.

Sadly, the king's men did not heed to her pleas, and cut down the tree along with Amrita Devi. Her three daughters and hundreds of other Bishnois followed her, and thus lost their lives saving trees.

-2 Marks

Chipko movement:

One significant movement in the conservation is the Chipko Movement of Garhwal Himalayas. In 1974, local women showed enormous bravery in protecting trees from the axe of contractors by hugging them and this were called the Chipko movement.

-1 Mark

Joint Forest Management:

Realizing the significance of participation by local communities, the Government of India in 1980s has introduced the concept of Joint Forest Management (JFM) so as to work closely with the local communities for protecting and managing forests.

In return for their services to the forest, the communities get benefit of various forest products (e.g., fruits, gum, rubber, medicine, etc.), and thus the forest can be conserved in a sustainable manner.

### MODEL QUESTION PAPER – 2 SUBJECT: BIOLOGY (36)

### II PUC

Time: 3 Hours and 15 minutes

### Maximum Marks: 70

### **GENERAL INSTRUCTIONS:**

- i) The question paper consists of four parts A, B, C and D. Part D consists of two parts, Section-I and Section-II. Part A contains of 10 questions of one mark each, Part B is of 8 questions of two marks each, Part C is of 8 questions of three marks each, Part D Section I is of 6 questions of five marks each and Part D Section II is of 5 questions of five marks each.
- ii) All the Parts are Compulsory.
- iii) Draw diagrams wherever necessary. Unlabelled diagrams or illustrations do not attract any marks.

### PART - A

### Answer the following questions in one word or one sentence each.

10x1=10

- 1. Define parthenogenesis.
- 2. What are meiocytes?
- 3. How does repressor protein prevent the transcription of structural genes?
- 4. Electrophoresis is an essential procedure that needs to be employed in genetic fingerprinting.

  Why?
- 5. What are biofertilisers?
- 6. Restriction enzymes are considered as a type of endonucleases. Why?
- 7. State Gause's competitive exclusion principle.
- 8. Why is pyramid of energy always upright?
- 9. What are 'biodiversity hotspots'?
- 10. Ozone layer in the stratosphere becomes thinner due to the release of CFCs. Give a scientific reason for this.

### PART - B

### Answer any FIVE of the following questions in 3-5 sentences each, wherever applicable:

5x2 = 10

- 11. "Unless foetal ejection reflex is produced, normal parturition does not occur". Substantiate the statement.
- 12. What is infertility? Mention one Assisted Reproductive Technology (ART).
- 13. What are multiple alleles? Why the alleles I<sup>A</sup> and I<sup>B</sup> for blood group are considered codominant?
- 14. What is the karyotype in Turner's syndrome? Mention two symptoms of the syndrome.
- 15. Mention the function of RNA polymerase I and RNA polymerase II in eukaryotes.
- 16. Explain two salient features of genetic code.
- 17. Differentiate homologous and analogous organs.
- 18. Define gene therapy. Name a genetic disorder that is being treated using the technique of gene therapy.

### PART - C

### Answer any FIVE of the following Questions in 40-80 words each, wherever applicable.

5x3=15

- 19. Mention three differences between asexual and sexual reproduction.
- 20. Explain the structure of a mature female gametophyte in flowering plants.
- 21. How do intra-uterine devices prevent conception in humans?
- 22. State Hardy Weinberg law. Write the role of any two factors that affect Hardy Weinberg
- 23. What are carcinogens? Mention any two groups of carcinogens with an example for each.
- 24. Differentiate out-crossing, cross breeding and interspecific hybridisation.
- 25. Write a note on Bt toxin.
- 26. Explain any three major causes of biodiversity loss.

### PART – D

### Section-I

### Answer any FOUR of the following questions on 200-250 words each, wherever applicable.

4x5 = 20

- 27. What is autogamy? Explain the devices that the plants have developed to prevent this.
- 28. Explain the different steps involved in translation.
- 29. Write the schematic representation of the life cycle of HIV.
- 30. Explain briefly the steps involved in recombinant DNA technology.
- 31. Briefly describe the different stages involved in decomposition.
- 32. Explain five effects of water pollution.

### Section-II

### Answer any THREE of the following questions in 200-250 words each, wherever applicable. 3x5=15

- 33. Draw the diagram of the sectional view of the female reproductive system in humans.
- 34. Explain Mendel's experiment that describes the inheritance of one gene.
- 35. Draw a labelled diagram of a biogas plant.
- 36. (a) Explain the application of tissue culture in any three fields. (3)
  - (b) Why continued inbreeding should be avoided in plants? (1)
  - (c) What is germplasm collection? (1)
- 37. Explain predation.

### MODEL QUESTION PAPER (THEORY) -2 SUBJECT : BIOLOGY (36)

II PUC

### Scheme of Evaluation

Q. No.	Page 1	ANSWER / VALUE POINTS	MARKS	PAGE NUMBER IN THE TB
Δnev	wer	PART – A in one word or one sentence each:	1	0 x 1 = 10
1		Development of the egg into an individual without fertilization	1	14
2		Gamete mother cells / Cells which undergo meiosis to form gametes	1	11
3		Repressor protein binds to the operator region of the operon and	•	
		prevents RNA polymerase from transcribing the operon	1	117
4	•	Required to separate DNA fragments obtained during restriction enzyme digestion	1	122
5	•	Biofertilisers are organisms that enrich the nutrient quality of the soil.	1	188
6				<u> </u>
		DNA.	1	196
7	•	Two closely related species competing for the same resources cannot co-exist indefinitely and the competitively inferior one will be eventually eliminated.	1	235
8		When energy flows from a particular trophic level to the next trophic	<u>.</u>	233
0	•	level, some energy is always lost as heat at each step.	1	249
9		'Biodiversity hotspots' are regions with very high levels of species		2-13
_		richness and high degree of endemism.	1	266
10	•	UV rays act on CFCs and release CI atoms which act as catalysts,	<u> </u>	
		degrade ozone, and release molecular oxygen.	1	282
	<u> </u>	PART – B		·
Ansı	wer	any FIVE in 3 – 5 sentences each:		5 x 2 = 10
11	•	Stimulation of pituitary to release oxytocin followed by stronger		
		contractions of uterine muscles due to oxytocin	1	
	•	Further secretion of oxytocin resulting in stronger and stronger		
		contractions that causes the expulsion of the foetus from the uterus	1	54
12	Inf	fertility:		
	•	Inability to produce children (conceive) in spite of unprotected sex	1	
	As	sisted reproductive technology:		ļ
	•	IVF-ET / ZIFT / GIFT / ICSI / Artificial insemination (AI)		
		ANY ONE	1	63 & 64
13	M	ultiple alleles:		
	•	Alleles which occur in more than two alternate forms	1	
	•	When I <sup>A</sup> and I <sup>B</sup> are present together in an individual, both A and B		
		types of sugar polymers are produced / Both the alleles express when they are together	1	77

14	Turner's syndrome:		
	Karyotype is 45 chromosomes with XO-/ 44A – XO	1	
	Symptoms:		
	Lack of female secondary sexual characters		
	Sterility due to rudimentary ovaries		
	Short stature ANY TWO → 2 x ½	1	91
15	RNA polymerase I – Catalyses the synthesis of rRNA (28S, 18S & 5.8S).	1	
	RNA polymerase II – Catalyses the synthesis of heterogeneous nuclear		
	RNA / hnRNA / precursor mRNA	1	110 &111
16	Features of genetic code:		
	Codons are triplet in nature. A codon is a unit consisting of three		
	nucleotides.		
	Genetic code is universal. A particular codon in mRNA codes for the		
	same amino acid in all organisms.		
ļ	Degeneracy or redundancy of codons: A single amino acid is coded by		
	more than one triplet codon.		
	Codons are specific and unambiguous: Triplet codons recognise	•	
·	specific amino acids during protein synthesis and therefore, they are		
	sensible.		**
	Codons are non - overlapping and commaless: Codons are units of		
	three nucleotides which are read continuously in 5. $\pm$ 3. direction		
	without any punctuation.		
	Genetic code has initiator codon. AUG is the initiator codon which		
	initiates protein synthesis. It codes for methionine.		
	Genetic code has stop codons. Of the 64 codons, three do not code for		
	any amino acids and are called stop codons (terminator codons or non		
	- sense codons → UAA, UAG and UGA).	4	
	MENTIONING TWO FEATURES: 2 x ½	1	
	EXPLANATION OF MENTIONED FEATURES: 2 x ½	. 1	112
17	Homologous organs: Organs or structures that have the same origin and		
	basic anatomical structure but perform different functions	1	
ļ	Analogous organs: Structures that are different in their basic anatomical		420.0.424
	structure and origin but appear similar and perform similar functions	1	130 & 131
18	Gene therapy:		
	Gene therapy is the replacement of a defective mutant allele with		
	a functional gene into an individual's cells and tissues to treat genetic /		
	hereditary diseases.		
	OR		
	It is the insertion of normal functional genes into the individual or		
	embryo with genetic defect to take over the function of and compensate	1	
	for the non-functional gene.  Genetic disorder: ADA deficiency / Adenosine deaminase deficiency	1	211
-	PART – C		
	* * ****		E - D 4=
<del></del>	wer any FIVE in 40 - 80 words each:		5 x 3 = 15
19	Differences between asexual reproduction and sexual reproduction:		
			1
<u> </u>		l	<u></u>

	ASEXUAL REPRODUCTION SEXUAL REPRODUCTION		
	Only one parent is Two parents of opposite sex are involved involved		
	Reproductive cells or • Involves the production and fusion of male		
	gametes (egg and sperm) and female gametes (sperm and egg)		
	are not produced     Offspring produced are of offspring produced are not identical and are	3	05
	Offspring produced are    Offspring produced are not identical and are		
	copies of the parent		
	EACH DIFFERENCE: 1 Mark		
20	Structure of female gametophyte in flowering plants:		<u>.</u>
	Egg apparatus at the micropylar end, three antipodals at the chalazal		
	end and a central cell	1	
		-	
	Egg apparatus consists of one egg cell and two synergids which have	1	
	cellular thickenings called <b>filiform apparatus</b> at the micropylar tip		26 & 27
	Central cell with two polar nuclei	1	20 84 27
21	Role of IUDs in contraception:		
	Increase phagocytosis of sperms within the uterus		
	Copper ions released by them decrease motility and fertilizing capacity	i	
	of sperms		
	Hormone releasing IUDs prevent implantation		
	Hormone releasing IUDs also make the cervix hostile for sperms		
	ANY THREE → 3 x 1	3	60
22	Hardy – Weinberg law:		
22	Allele frequencies in a population are stable and are constant from		
	generation to generation.		
•	OR		
	Allele frequency or gene frequency in a population (gene pool)		
	remains constant from generation to generation unless there are factors to	_	
	upset it	1 .	
	Role of factors that affect Hardy – Weinberg equilibrium:		-
	Gene flow: It is the movement of genes or alleles from one population to		
	another when there is a migration of a section of population to another		
	place and population. This changes gene frequencies.		
	Genetic drift: It is the random change in the gene frequency by chance (in		
	small populations). The change in gene frequency in the new population		•
	may be so different that the members become a different species		
	(founder's effect).		).
	Mutation: It is the sudden heritable change in genetic material which		
	results in new genotypes and phenotypes, thus altering the gene		
	frequency.		
	Genetic recombination: It occurs during gametogenesis (meiosis) and		
	results in variations. This would result in change in gene frequency over a		<b> </b>
	period of time.		1
	Natural selection: Variations that occur as a result of mutations or		
	recombinations or due to gene flow or genetic drift enhance reproductive		
	success or fitness. Survivors would leave more progeny and over a period of		
 	time the gene frequency of the population changes.		
	MENTIONING ANY TWO FACTORS: 2 X ½	1	
	EXPLANATION OF THE MENTIONED FACTORS: 2 X ½	1	136 & 137
23	Carcinogens:		

	Agents that cause cancer are called carcinogens.	1	
	Groups of carcinogens:		
	Physical agents: X-rays, gamma rays, UV rays		
	Chemical agents: Chemicals present in tobacco smoke		
	Biological agents: Oncogenic viruses		
	MENTIONING ANY TWO GROUPS: 2 X ½	1	
	ONE EXAMPLE EACH FOR THE MENTIONED GROUPS: 2 X 1/2	1	157
24	Out-crossing: It is the mating of the animals of the same breed but which		
	have no common ancestors on either side of the pedigree up to 4 - 6		
	generations.	1	
	Cross-breeding: It is the mating of superior males of one breed with		
	superior females of another breed (both with desirable characters).	1	
	Inter-specific hybridization: It is the mating of male and females of two		
	different but related species.	1	168
25	Bt toxin:	""	
Í	Bt toxin is an insecticidal protein formed in the form of crystals during		
	a particular phase of the growth of Bacillus thuringiensis.	1	
	It exists as inactive <i>protoxin</i> in bacteria and is converted into an active		
		1	
	form of toxin in insect due to the alkaline pH of the gut.		
	Active toxin binds to the surface of epithelial cells of the midgut and		
	creates pores which cause cell swelling and lysis and eventually the	1	208 & 209
	death of the insect.		
26	Causes of biodiversity losses:		
	Habitat loss and fragmentation:		
	Many large habitats like forests have been destroyed by man either for		
	cultivation or for conversion to grasslands and broken up into small		
	fragments which leads to the decline in the population of living		!
	organisms.		
	Over-exploitation:		
	Over-exploitation of natural resources for the purpose of food, shelter	-	
	and other purposes and harvesting of many marine fish populations by		
	humans leads to the elimination of many species.		
	Alien species invasions:		
	Unintentional or deliberate introduction of alien species may cause the		
	decline or extinction of indigenous species as they may turn invasive.		
	Co-extinctions:		
	When a species becomes extinct, the plant and animal species		
	associated with it in an obligatory way also becomes extinct.		
	MENTIONING OF ANY THREE CAUSE: 3 x ½	11/2	
	XPLANATION OF THE MENTIONED CAUSE: 3 X ½	11/2	264 & 265
	PART – D		
	Section – I		
Ans	wer any FOUR in 200 – 250 words each:		4 x 5 = 20
27	Autogamy:		
	Self pollination in which there is transfer of pollen grains from the		 
	anthers to the stigma of the same flower	1	
	Devices in flowering plants to prevent autogamy:		}
	Release of pollen grains before the stigma becomes receptive or stigma		
<u> </u>			L

٠..

Placement of anthers and stigma at different positions so that pollen cannot come in contact with the stigma of the same flower  Self incompatibility — Genetic mechanism which inhibits the germination of pollen grain or growth of the pollen tube inside the style, thus preventing the fertilization process  Unisexuality — Production of unisexual flowers (male and female flowers on different plants or on the same plant)  Roman of tRNA (aminoacylation of tRNA) — Activation of amino acids in the presence of ATP and their linking to specific tRNA  Binding of the ribosome (small sub-unit) to mRNA at the initiator codon (AUG)  Binding of the initiator tRNA carrying the amino acid (methionine) to the initiator codon to initiate protein synthesis  Movement of ribosome from codon to codon along the mRNA and adding of amino acids (linked to tRNA) one by one — elongation of polypeptide chain.  Binding of the release factor to the stop codon located at the 3'-end of mRNA, terminating translation and releasing the polypeptide from ribosome.  29 Schematic representation of life cycle of HIV:  Viral RNA with protein cost  Infection of normal cell by the virus  ANIMAL CELL  Viral RNA with protein cost  Infection of normal cell by the virus  Infection of normal cell by the virus  Infection of normal cell by the virus  Infection of normal cell by the virus  INFECTION OF CELL BY HIV  REVERSE TRANSCRIPTION AND PRODUCTION OF VIRAL DNA 1  PRODUCTION OF NEW VIRAL DNA 11  PRODUCTION OF NEW VIRAL DNA 11  FORMATION OF NEW VIRAL PARTICLES AND THEIR RELEASE 1  30 Recombinant DNA technology:			
cannot come in contact with the stigma of the same flower  • Self incompatibility — Genetic mechanism which inhibits the germination of pollen grain or growth of the pollen tube inside the style, thus preventing the fertilization process  • Unisexuality — Production of unisexual flowers (male and female flowers on different plants or on the same plant)  28 Translation in eukaryotes:  • Charging of tRNA (aminoacylation of tRNA) — Activation of amino acids in the presence of ATP and their linking to specific tRNA  • Binding of the ribosome (small sub-unit) to mRNA at the initiator codon (AUG)  • Binding of the initiator tRNA carrying the amino acid (methionine) to the initiator codon to initiate protein synthesis  • Movement of ribosome from codon to codon along the mRNA and adding of amino acids (linked to tRNA) one by one — elongation of polypeptide chain.  • Binding of the release factor to the stop codon located at the 3'-end of mRNA, terminating translation and releasing the polypeptide from ribosome.  29 Schematic representation of life cycle of HIV:  Viral RNA  **Wiral RNA with protein coat*  Infection of normal cell by the virus  **ANIMAL CELL*  Viral RNA  **Wiral RNA with protein coat*  Infection of normal cell by the virus  **ANIMAL CELL*  Viral RNA  **NORPORATION OF VIRAL DNA INTO HOST DNA INCORPORATION OF OF VIRAL DNA INTO HOST DNA INCORPORATION OF NEW VIRAL RNA INTO HOST DNA INCORPORATION OF NEW VIRAL RNA INCORPORATION OF NEW VIRAL PA	becoming receptive much before the release of pollen grain	1

	Isolation of the genetic material (DNA):		
	Bacterial cells / plant or animal tissues are treated with enzymes such		
	as lysozyme (bacteria), cellulase (plant cells), chitinase (fungus), etc. to		
	digest the membrane and isolate DNA along with other		1
	macromolecules (RNA, proteins, polysaccharides and lipids). Other		
	molecules are removed by appropriate treatments. Chilled ethanol is		
	added to get purified DNA as precipitate.	1	
	Cutting of DNA and isolation of desired DNA fragment:		
	Purified DNA molecules are incubated with the restriction enzyme, at		
	the optimal conditions for restriction enzyme digestion. Desired DNA		
ŀ	fragment is isolated by agarose gel electrophoresis.	1	
	Ligation of the DNA fragment into a vector:	_	
	The cut out 'gene of interest' from the source DNA and the cut vector		
	-	1	
	with space are mixed and ligase is added to produce recombinant DNA.	•	
]	Insertion of recombinant DNA into the host cell /organism:		
	Recipient cells are made 'competent' to receive and take up DNA		
'	present in its surrounding and the recombinant DNA is introduced into	1	
Ì	it by microinjection or gene gun technique	_	
	Culturing of host cells and obtaining the foreign gene product:		
	The cells having cloned genes of interest are grown on a small scale in		
	the laboratory in a culture medium. To produce the products in large		
	quantities, the cells can also be multiplied in continuous culture	4	201 to 204
	systems called bioreactors.	1	201 to 204
31	Steps (stages) of decomposition:		
	Fragmentation:		
	It is the break down detritus into smaller particles by detritivores		
	(earthworm).		
	Leaching:		
	It is the process in which water soluble inorganic nutrients go		
	down into the soil horizon and get precipitated as unavailable salts.		
	Catabolism:		
	It is the process in which bacterial and fungal enzymes degrade		† 1
	detritus into simpler inorganic substances.		
	Humification:		
	It is the process which leads to the accumulation of a dark		
	coloured amorphous substance called humus that is highly resistant to		
	microbial action and undergoes very slow decomposition.		
	Mineralisation:		
	It is the degradation of humus by some microbes and the release		
	of inorganic nutrients.		•
	MENTIONING OF EACH STEP: ½ MARK EACH	21/2	
-	EXPLANATION OF THE MENTIONED STEP: 1/2 MARK EACH	21/2	243 & 244
32	Effects of water pollution:		
	Release of sewage decreases dissolved oxygen (used by microbes for		
	degradation of organic matter) and causes mortality of fish and other		
	aquatic organisms.		
	Sewage contains many pathogenic microorganisms that spread serious		
	diseases like dysentery, typhoid, jaundice, cholera, etc.		
	Presence of large amounts of nutrients in water causes excessive		
L		Į.	Ì

growth of planktonic algae, i.e., algal bloom that changes the colour of water and deterioration of water quality and results in fish mortality.  Release of nutrients such as nitrogen and phosphorus causes eutrophication which leads to the excessive growth of aquatic weeds like water hyacinth (Eichhomio crassipes – Terror of Bengal).  Toxic substances such as mercury, cadmium, copper, lead, etc., undergo biological magnification (Biomagnification) in the aquatic food chain and cause harmful effects on animals of different trophic levels.  Thermal waste water reduces the number of organisms sensitive to high temperature, and may enhance the growth of plants and fish in extremely cold areas but, only after causing damage to the indigenous flora and fauna. 	Tt tt Tall Dwarf		
	Phenotypic ratio – Tall: Dwarf → 3:1		
	Genotypic ratio - TT: Tt: tt → 1:2:1	·	
	Based on the result of this monohybrid cross, Mendel put for	rward	
	the law of segregation, i.e., factors or alleles for a pair of conti	i	
	characters do not blend, but segregate or separate during g		
	formation such that a gamete receives only one of the factors (pu gametes).	rity of	
35	Biogas plant:		
	prince and the second	— Gas	
	Dung Water  (CH, +CO) + CLL  Sludge  Sludge  Digester		
	NEAT AND CORRECT DIAC	i	405
36	SIX CORRECT LABELLINGS →	6 X ½ 3	186
30	<ul> <li>(a) Applications of tissue culture:</li> <li>Micropropagation: It is used for the propagation / production large number of plants in short durations. Micropropagation processing someoclones (plants genetically identical to the original / parent p</li> <li>Virus-free plants: Meristems of plants are grown by tissue culting the cultiple of the plants. By this method, healthy plants can be received.</li> </ul>	oduces lant). ture to	
	from diseased plants.  • Somatic hybridization: Somatic hybrids obtained from s	omatic	

•	hybridization (fusion of naked protoplasts isolated from two different		•
	, , ,		
	varieties of plants) can be further grown to form new plants by tissue culture.		
	MENTIONING THE FIELD OF APPLICATION → 3 X ½	1½	
	EXPLANATION OF THE APPLICATION $\rightarrow$ 3 x ½	1½	177
	(b) Continued inbreeding results in inbreeding depression which decreases		
	fertility and productivity of plants.	1	167
	(c) Germplasm collection:It is the entire collection of plants or seeds having		
	diverse alleles for all the genes in a given crop.	1	171
37	Predation:		
	Predation is a type of interaction in which a larger organism called		
	predator of higher trophic level feeds on another organism called prey		
	of lower trophic level.	1	
	In this type of interaction, one of the partner's (predator) is benefitted	<b>-</b>	
	while the prey is harmed.	' <b>1</b>	
	Role played by predators:		
	They act as links for energy transfer across trophic levels.	. 1/2	
	They keep prey populations under control.	1/2	
	Defences developed by animal preys against predators:		
	Some show cryptic colouration to avoid being detected easily by the		
	predator	1/2	
	Some are poisonous and some are highly distasteful and therefore are		,
	avoided by the predators.	1/2	
	Defences developed by plant preys against predators:		
	Thorns (Acacia, Cactus) are morphological means of defence.	1/2	
	Many plants produce and store chemicals like nicotine, caffeine,		
	quinine, strychnine, opium, etc., that make the herbivore sick when		
	they are eaten, inhibit feeding or digestion, disrupt its reproduction or		1
	even kill it.	1/2	233 & 234

Note: 1) The question paper must be prepared based on the individual blue print which is based on the weightage of marks fixed for each Unit /chapter.

# II PUC MODEL PAPER. ○3 SUBJECT: BIOLOGY (36)

Time: 3.15Hours

Max Marks: 70

GENERAL INSTRUCTIONS: i) This question paper consists of five parts A.B.C.D and E.

ii) All the Parts are Compulsory.

iii) Draw diagrams whenever necessary.

Unlabelled diagrams or illustrations do not attract any marks.

### PART-A

### Answer the following questions in *One Word* or *One Sentence* each:

10x1=10

- 1. Define parthenocary.
- 2. What is Polyembryony?
- 3. Why eukaryotic genes are called split genes?
- 4. Define Law of dominance.
- 5. Expand BOD.
- 6. Write the binomial name of the organism that causes filariasis.
- 7. Name the fungi which has symbiotic association with many plants.
- 8. Why a pathogen Agrobacterium tumifaciens is generally used as a vector in plants for cloning.
- 9. In which food chain dead organic matter occupies the base?
- 10. How is the scared groove important in conservation of Biodiversity?

### PART-B

### Answer any FIVE of the following questions in 3-5 sentences each

5x2=10

### Wherever applicable:

- 11. What is xenogamy? Mention its importance.
- 12. Who wrote "Origin of Life"? What is the focal point of big bang theory?
- 13. List the components of Operon concept.
- 14. What are causes of cancer?
- 15. With reference to tissue culture, what is i) Totipotency ii) Somatic hybrids.
- 16. What is biolistics? Where it is generally used?
- 17. What are factors that are responsible for fluctuations of population growth.
- 18. What is biomagnifications give an example for it.

### PART-C

### Answer any FIVE of the following Questions in 100-150 words each:

5x3=15.

19. What kind of reproduction is seen in following organisms?

Penicillium, Chlamydomonas and sponges.

- 20. Define contraceptive. Mention any four important qualities of a good contraceptive.
- 21. Why Mendel's work was not recognized? Give any three reasons.
- 22. What is inborn immunity? Write note on any of them.
- 23. Brief note on i) inbreeding ii) out breeding iii) crossbreeding.
- 24. Expand the abbrivation GMO. Write any four uses of it.
- 25. Draw a schematic representation of carbon cycle.
- 26. Note on a case study of plastic waste.

### PART-D

### **SECTION-I**

Answer any FOUR of the following questions on 200-250 words each:

4x5 = 20

- 27. With help of diagram of mature embryo sac, explain double fertilization.
- 28. Draw a neat diagrammatic view of male reproductive view.
- 29. A molecule that acts as genetic material must have some criteria. Mention those criteria and write note on it.
- With help of diagram explain plasmid BR322.
- 31. Represent schematically replication of retrovirus.
- 32. Define and discuss the following terms, a) Mutualism b) Competition.

### **SECTION -II**

### Answer any THREE of the following questions in 200-250 words each:

3x5=15

- 33. Draw neat labeled diagram of sectional view of mammary gland.
- 34. Define aneuploidy. Name an allosomal hyperaneuploidy condition and mention its characters.
- 35. mention any five characters of genetic code write note on it.
- 36. Write note on a typical biogas plant. How microbes help in production of biogas.
- 37. What are abiotic factors? Discuss the importance of any four factors.

### <u>II PUC</u>

### **SCHEME OF EVALUATION**

### PART –A

<ol> <li>In some species in which fruits develop without fertilization.</li> </ol>	1 mark.
2. Occurrence of more than one embryo in a seed.	1 mark.
3. As they have introns and exons.	1 mark.
4. In hereogenous condition the gene which expresses itself is called dominate chara-	cter. 1 mark.
5. Biochemical Oxygen Demand.	1 mark.
6. Waucheria bancrofti. Or Waucheria malayi.	1 mark.
7. Mycorrhiza.	1 mark.
8. It has Ti plasmid in which desired gene can incorporated.	1 mark.
9. Detritus food chain.	1 mark.
10. Trees and wildlife can be protected.	1 mark.
<u>PART –B</u>	
11. Transfer of pollen grains from anther to the stigma of a different plant.	1 mark.
It brings great genetic variation.	1mark.
12. Oparin.	1 mark.
Life evolved for the first time and for last time from nonliving, then on life	evolved from
preexisting life	1 mark.
producting men	_ ,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,
13. Regulatory gene, Promoter gene, Operative gene & Structural gene.	Each ½ mark.
14. The agents are called carcinogens. ½ mark. Agents could be physical	l, chemical &
biological.	Each ½ mark.
15. Any plant cell or explants can generate a complete plant is called totipoten	t. 1 mark.
Isolate protoplasts from two different varieties of plants two having desira	able character
and is fused is called somatic hybrid.	1 mark.
16. Restriction endonuclease. ½ mark. It is also called molecular scissor.	½ mark. It
recognizes a specific palindromic nucleotide sequences. ½ mark. REN are endonuclease and exonuclease. ½ mark.	
	ach ½ marks.
18. Biomagnification refers to increase in concentration of toxic substance	
tropic level.	1 mark.
Mercury or DDT. (any one)	1 mark.

19. All by asexual method.

½ mark.

Penicllium- conidium, Chlamydomonas- zoospore and sponges- Gemmules. Each ½ mark

- 20. Contraceptive is the method which prevents unwanted pregnancies. 1 mark.
  - i) It is user friendly. Ii) Easily available iii) Effective & reversible with the sexual drive, desire and the sexual act of the user.
- 21. I) Communication was not easy in those days.
  - II) His concept of "Factors" contolled the expression of traits & of the pair of alleles which did not 'blend' with each other, was not accepted by his contemporaries.
  - III) Mendel's approach of using mathematic to explain biological approach.
  - IV) Microscope was not discovered at that time. (Any three point) Each 1 mark.
  - V) Refer Biology prescribed text book for I PUC, Page no 103, fig 7.4 (a). Each label ½ marks.
- 22. Refer Biology prescribed text book for II PUC, Page no 150, Definition. 1 mark.

  Any one barrier with four points Each points ½ mark.
- 23. Refer Biology prescribed text book for II PUC, Page no 168, Defination of each term. Each 1 mark
- 24. Refer Biology prescribed text book for II PUC, Page no 208, GMO- Genetically Modified Organism. 1 mark (Any four uses). Each uses ½ marks.
- 25. Refer Biology prescribed text book for II PUC, Page no 253.
- 26. Refer Biology prescribed text book for II PUC, Page no 279(16.3.1)

### PART-D

### SECTION -I

- 27. Refer Biology prescribed text book for II PUC, Page no 26. Fig no 2.8 c any six labels ½ mark each. (3 marks). Double fertilization, 2 mark.
- 28. Refer Biology prescribed text book for II PUC, Page no 43. Fig no 3.1( a or b). Neat diagram 1 mark. Any eight labels ½ mark each.
- 29. Refer Biology prescribed text book for II PUC, Page no 103.

  DNA OR RNA is genetic material, as they have the following criteria.

  1mark.

  Mentioning of each criterion ½ marks. Explain the same ½ mark.
- 30. Refer Biology prescribed text book for II PUC, Page no 199. Fig no 11.4 any four labels ½ mark each. (2 marks). Note on pBR 322, 2 marks.
- 31. Refer Biology prescribed text book for II PUC, Page no 155. Fig no 8.6. Neat diagram 1 mark. Each step ½ marks.
- 32. Note on Mutualism 2½ mark, Competition 2½ mark.

### SECTION -II

- 33. Refer Biology prescribed text book for II PUC, Page no 46. Fig no 3.4. Neat diagram 1 mark. Each label ½ marks.
- 34. Refer Biology prescribed text book for II PUC, Page no 90 for an euploidy definition, and page no. 91 Klinefelter's syndrome. Defination 2 mark. Mentioning abnormality 1 mark. For its each character 1 mark (any 2 character.)
- 35. Mentioning of each character ½ marks, note on each ½ mark.
- 36. Refer Biology prescribed text book for II PUC, Page no 186. Fig no 10.8. Any four labels. Each label ½ mark. Explanation 3 marks.
- 37. Definition 1 mark. Any four factors with note on it. 1 marks each.

Refer Biology prescribed text book for II PUC, Page no 150, fig 7.4 (a). Each labels ½ marks.
